<b>Brief Description about the activity</b>	This activity was designed to encourage the students toward creative thinking. During childhood, we are not familiar with established laws of nature, therefore, we make lot of assumptions out of our curiosity. This leads to creative mind in childhoos. However, as we grow up, we start studying laws of nature and then start thinking about the phenomenon only in terms of these established laws. Due to this mind slowly looses its creativity. This activity gave the students a chance to make any assumption or define any law of physics according to their interest and then possible explain conclusions and predictions related to the assumption made by them. Students were				

allowed to make an assumption about the Universe, which can include changing any physical law, universal constant or phenomenon. Further, students were to explain this and describe the results it will have on the universe.

Criteria for choosing the winner was, how creative was the assumption and its consequences.
